Mr. Carlisle,

In answer to your questions:

1. Does the payments to the laboratory reflect the total amount spent drug testing athletes?

YES

2. Why were there so many more positive tests in 2006?

The number of tests increased dramatically, almost x4. See the budget increase indicated in the information already provided to you.

3. Can the campus please provide a breakdown of the substances for which athletes tested positive and the sports played by athletes who tested positive?

The substances students tested positive for included marijuana, prescription pain relievers, prescription ADD/ADHD medications and/or prescription psychological medications.

We are not providing the sports played by any athlete who tested positive since we do not normally provide information on cells of ten or fewer individuals, as that could lead to their identification and thereby result in an unwarranted invasion of their privacy in violation of applicable state law. Mr. Kolling can answer any further questions you may have in this regard.

Thank you,

Ryan Cobb
Cal Sports Medicine

Dear Mr. Cobb and Mr. Kolling:

Thank you for the documentation you provided. I have some questions.

Does the payments to the laboratory reflect the total amount spent drug

testing athletes?

Why were there so many more positive tests in 2006?

Can the campus please provide a breakdown of the substances for which athletes tested positive and the sports played by athletes who tested positive?

Thank you again for your help.

Sincerely,
Nate Carlisle
